

LUNORSOFT

INTERNSHIP RECRUITMENT

ROUND 1

ASSIGNMENT BRIEF

2026

10 INTERNSHIP POSITIONS

AI Developer · Full Stack Developer · UI/UX Designer
Video Editor · Content Creator · Videographer

ASSIGNMENT DEADLINE

18 September 2026 · 12:00 PM IST

LUNORSOFT TECHNOLOGIES PRIVATE LIMITED

01 – RECRUITMENT PROCESS

Thank you for your interest in joining **Lunorsoft Technologies Private Limited**.

To ensure a fair and practical selection process, the recruitment process has been structured into three rounds.

Round 1 – Assignment Task

Candidates will complete a practical, role specific assignment designed to evaluate their skills, problem solving ability, creativity, and approach to real world tasks.

Round 2 – Video Explanation

Candidates shortlisted from Round 1 will be asked to submit a short video explaining their assignment, approach, decisions, and overall thought process.

Round 3 – One-on-One Interview

Candidates shortlisted from Round 2 will attend a final one-on-one interview with the Lunorsoft team.

The interview will focus on the candidate's understanding of their work, role-specific skills, problem-solving ability, communication, and approach to working in a startup environment.

02 – GENERAL INSTRUCTIONS

1. Complete the assignment corresponding to the role you applied for.
2. Read the complete assignment requirements before starting.
3. You may use online resources and AI tools such as ChatGPT, Claude, Gemini, Cursor, GitHub Copilot, and similar tools.
4. If you use AI tools, clearly mention which tools were used and how they contributed to your work.
5. Using AI tools is allowed. However, you should understand the work you submit, as you will be required to explain your approach in Round 2.
6. Do not submit copied work from another candidate or reproduce an existing project without meaningful contribution.
7. Keep your work organized and ensure that all submitted links are accessible.
8. Before submitting, test your links using an incognito/private browser window.

9. Focus on the quality and understanding of your solution rather than adding unnecessary features.
10. Submit your assignment before the specified deadline.

IMPORTANT

AI tools are allowed. However, transparency is mandatory. Candidates should be able to explain their work and decisions during Round 2.

03 – AI DEVELOPER

Assignment: Choose ONE AI Development Task

Choose one of the following two assignments based on your interests and skills.

Option 1 – Build a Mini AI Knowledge Assistant

Core Requirement: RAG

Objective

Build a simple AI-powered application that can answer questions based on a provided document or collection of documents.

Requirements

The application should:

1. Use a PDF/document or collection of documents as the knowledge source.
2. Extract and process the document content.
3. Split the content into appropriate chunks.
4. Generate embeddings for the content.
5. Store and retrieve relevant information using a vector store or suitable retrieval mechanism.
6. Accept questions from the user.
7. Retrieve relevant information and generate answers using an LLM.
8. Ensure that answers are primarily based on the provided knowledge source.
9. Provide a simple and usable interface.

Suggested Technologies

You may use technologies such as:

- Python
- LangChain / LlamaIndex
- OpenAI / Gemini / Hugging Face
- FAISS / Chroma / Pinecone
- Streamlit / Gradio

Optional / Bonus Features

- Source citations
- Conversation history
- Multiple documents
- Improved retrieval or evaluation
- Deployment

Submission Requirements

Submit:

- GitHub repository
- Working demo/link, if available
- README explaining your approach and implementation

Option 2 – Build a Fine-Tuned AI Coding Assistant

Core Requirement: Fine-Tuning

Objective

Build a simple AI-powered assistant that helps engineering students with programming and learning-related questions.

Requirements

The application should:

1. Prepare a small programming or learning dataset.
2. Clean and format the dataset for training.
3. Fine-tune an open-source language model using LoRA, QLoRA, or another suitable method.
4. Test the fine-tuned model using a set of programming-related questions.
5. Compare the base model and fine-tuned model.
6. Provide a simple interface to interact with the fine-tuned model.

7. Document the dataset, model, training process, and results.

Core Screens

The redesign should include at least:

1. Landing / Home Page
2. Student Dashboard
3. AI Coding Workspace
4. Learning / Mentor Section
5. Project / Workspace Management
6. One important mobile screen

Candidates may add additional screens if they believe they improve the overall user experience.

Deliverables

Submit:

- Figma file/link
- High-fidelity designs
- Clickable prototype
- Brief explanation of the problems identified
- Brief explanation of major design decisions

Optional Bonus Features

- Design system / component library
- Dark mode
- Micro-interactions
- Accessibility improvements
- Additional mobile screens
- User flow diagrams
- Wireframes
- Usability testing or user feedback
- Additional product improvements

Evaluation Criteria

The submission will be evaluated based on:

- Understanding of the existing product
- UX problem identification
- User flow and navigation

- Visual hierarchy
- Design consistency
- Usability
- Responsive design
- Creativity
- Quality of execution
- Ability to justify design decisions

Important

The objective is not to simply create attractive screens. Candidates should demonstrate how their redesign improves the experience for Lunorsoft users and why they made their design decisions.

AI design tools are allowed, but transparency is mandatory. Candidates must disclose their use of AI tools and should be able to explain their design decisions during Round 2.

Existing Platform

Lunorsoft Platform: lunor.online

04 – FULL STACK DEVELOPER

Assignment: Build a Student Task Management Application

Objective

Build a simple full-stack application that allows students to manage their academic or personal tasks.

Requirements

The application should allow users to:

1. Create tasks.
2. Edit tasks.
3. Delete tasks.
4. Mark tasks as completed.

5. View pending and completed tasks.
6. Filter or organize tasks.
7. Store task data in a database.
8. Use a clean and responsive user interface.

Technical Requirements

Frontend

Use React, Next.js, or another suitable frontend framework.

Backend

Implement an API or server-side architecture for handling application logic.

Database

Use PostgreSQL, MySQL, MongoDB, or another suitable database.

Optional / Bonus Features

- Authentication
- Search
- Task priority
- Due dates
- Dashboard/statistics
- Deployment
- Form validation
- Error handling
- TypeScript

Submission Requirements

Submit:

- GitHub repository
 - Live deployment link, if available
 - README
 - Database/setup instructions
 - Short explanation of your architecture and approach
-

05 – UI/UX DESIGNER

Assignment: Redesign the Lunorsoft Platform

Objective

Redesign the Lunorsoft platform to create a modern, intuitive, and user-friendly experience for engineering students.

The goal is not only to make the platform visually attractive, but also to improve its usability, navigation, and overall user experience.

Required Screens

The redesign should include:

1. Review the existing Lunorsoft platform and identify key UI/UX issues.
2. Redesign the main interface and navigation.
3. Improve the overall user flow and information hierarchy.
4. Design the core screens required for the platform.
5. Maintain a consistent design system across the platform.
6. Ensure the design is responsive for desktop and mobile.
7. Create a clickable prototype demonstrating the main user flow.
8. Briefly explain the key problems identified and the design decisions made.

Deliverables

Submit:

- Figma file/link
- High-fidelity designs
- Prototype
- Wireframes, if created
- Brief explanation of your design decisions

Evaluation Focus

We will consider:

- User experience
- Visual hierarchy
- Consistency
- Accessibility

- User flow
 - Design thinking
 - Creativity
 - Understanding of engineering students as users
-

06 – VIDEO EDITOR

Assignment: Create a Promotional Reel for Lunorsoft

Objective

Create a **30–45 second promotional video** introducing Lunorsoft to engineering students.

The video should communicate why an engineering student would be interested in an AI-powered learning and development platform.

Target Audience

Engineering students interested in:

- Coding
- AI
- Software development
- Projects
- Learning new technologies

Creative Direction

You may create your own concept.

Your video should ideally communicate:

Problem → Solution → Value → Call to Action

You May Use

- Motion graphics
- Screen recordings
- Stock footage
- Text animation

- Product visuals
- Voice-over
- Music/SFX

Deliverables

Submit:

- Final edited video
- Optional project/source file
- Short explanation of your creative approach

Evaluation Focus

- Storytelling
 - Editing quality
 - Pacing
 - Visual composition
 - Typography
 - Audio
 - Creativity
 - Understanding of the target audience
-

07 – CONTENT CREATOR

Assignment: Create a 7-Day Content Strategy for Lunorsoft

Objective

Create a content strategy designed to introduce Lunorsoft to engineering students and build awareness around the product.

Target Audience

Engineering students aged approximately 18–24.

Deliverables

Create a **7-day content calendar**.

For each day, include:

- Content topic
- Platform
- Content format
- Hook
- Caption/script
- Visual concept
- Call to action

You may use platforms such as:

- Instagram
- YouTube
- LinkedIn
- X
- Other relevant platforms

Additional Task

Choose **one** of your seven ideas and create the actual content.

Examples:

- Instagram post
- Reel script
- Carousel
- Short-form video
- LinkedIn post

Evaluation Focus

- Creativity
- Understanding of the target audience
- Content strategy
- Writing ability
- Hooks
- Storytelling
- Marketing thinking
- Originality

08 – VIDEOGRAPHER

Assignment: Create a Short Promotional Video for Lunorsoft

Objective

Create a **30–60 second promotional video** for Lunorsoft aimed at college students.

The video should demonstrate your ability to plan, shoot, and visually communicate an idea.

You may use a smartphone, DSLR, mirrorless camera, or any equipment available to you.

Your Video Should Demonstrate

- Good composition
- Framing
- Lighting
- Camera movement
- Variety of shots
- Visual storytelling

Deliverables

Submit:

1. Final video
2. Raw footage/clips used in the video
3. Short description of your shooting setup
4. Basic shot list

Example:

Shot 1: Establishing shot

Shot 2: Close-up

Shot 3: Product interaction

Shot 4: Over-the-shoulder shot

Shot 5: Final / CTA shot

Evaluation Focus

- Camera work
- Composition
- Lighting
- Shot selection
- Stability
- Creativity

- Storytelling
 - Overall visual quality
-

09 – SUBMISSION REQUIREMENTS

Submission Deadline

18 September 2026 — 12:00 PM IST

All candidates must submit their completed assignment through the official **Lunorsoft Round 1 Submission Form**.

Before submitting, make sure you have:

- ☐ Completed the assignment for your selected role
- ☐ Checked that your project/files are accessible
- ☐ Included the required GitHub/Figma/Drive/video link
- ☐ Added a short explanation of your approach
- ☐ Listed the technologies/tools used
- ☐ Disclosed any AI tools used
- ☐ Tested your links in an incognito/private browser
- ☐ Submitted before the deadline

Submission Form

[Submit here](#)

10 – AI & EXTERNAL RESOURCES POLICY

At Lunorsoft, we understand that AI tools are becoming an important part of modern software development and creative work.

Therefore, **AI tools are allowed unless specifically restricted by the assignment.**

We are not evaluating candidates based solely on whether they used AI.

We are evaluating:

How you think.

How you use tools.

How you solve problems.

How well you understand your work.

If you use AI, please be transparent about it.

During Round 2, you may be asked questions about your implementation, creative decisions, and approach.

11 – EVALUATION

Assignments will be evaluated based on the requirements of the respective role.

Some of the factors we will consider include:

- Understanding of the problem
- Quality of execution
- Problem-solving approach
- Technical/creative skills
- Attention to detail
- Creativity
- Communication
- Overall quality of the submission

The complexity of your submission is **not** the only factor being considered.

A simple, well-executed solution with clear reasoning can be stronger than a complex submission that you cannot explain.

12 – WHAT HAPPENS NEXT?

Round 2 – Video Explanation

Candidates shortlisted from Round 1 will be contacted with further instructions.

The video will give you an opportunity to explain:

- Your understanding of the assignment
- Your approach
- Your implementation/design
- Important decisions you made
- Challenges you faced
- What you would improve
- Tools and resources you used

Round 3 – One-on-One Interview

Candidates shortlisted from Round 2 will be invited for a final one-on-one interview with the Lunorsoft team.

The interview may cover:

- Your assignment
- Role-specific skills
- Problem-solving
- Technical/creative knowledge
- Communication
- Learning ability
- Your approach to working in a startup environment

Good luck with Round 1.

We understand that candidates may have different levels of experience. You are not expected to know everything.

Focus on **understanding the problem, building something meaningful, and presenting your own approach.**

We look forward to seeing your work.
